

UNIVERSAL
FUEL TECHNOLOGIES

Chemical Technologies for Profitable Decarbonization

*Turning oil refineries into
renewable fuel champions*

info@unifuel.tech

\$2T

in refinery assets

40%

of global emissions

What if these assets could lead decarbonization?

Renewable fuels exist — but they're too expensive

EXISTING TECHNOLOGIES

- Costly multi-step conversion processes
- High minimum scale — requires huge capital
- Low product yield, high waste
- Need expensive renewable hydrogen

FLEXIFORMING®

- 1-2 steps, uses $\frac{1}{4}$ the energy
- Very low minimum scale (10% of alternatives)
- Converts low-value byproducts to high-value fuels
- Can be a net producer of renewable hydrogen

Result: SAF at \$3.50/gal vs. \$7.00/gal today

A \$50B opportunity — demand massively outpaces supply

89%

of global population wants more
climate action

Source: Nature 2024

>100×

SAF demand exceeds global
production capacity

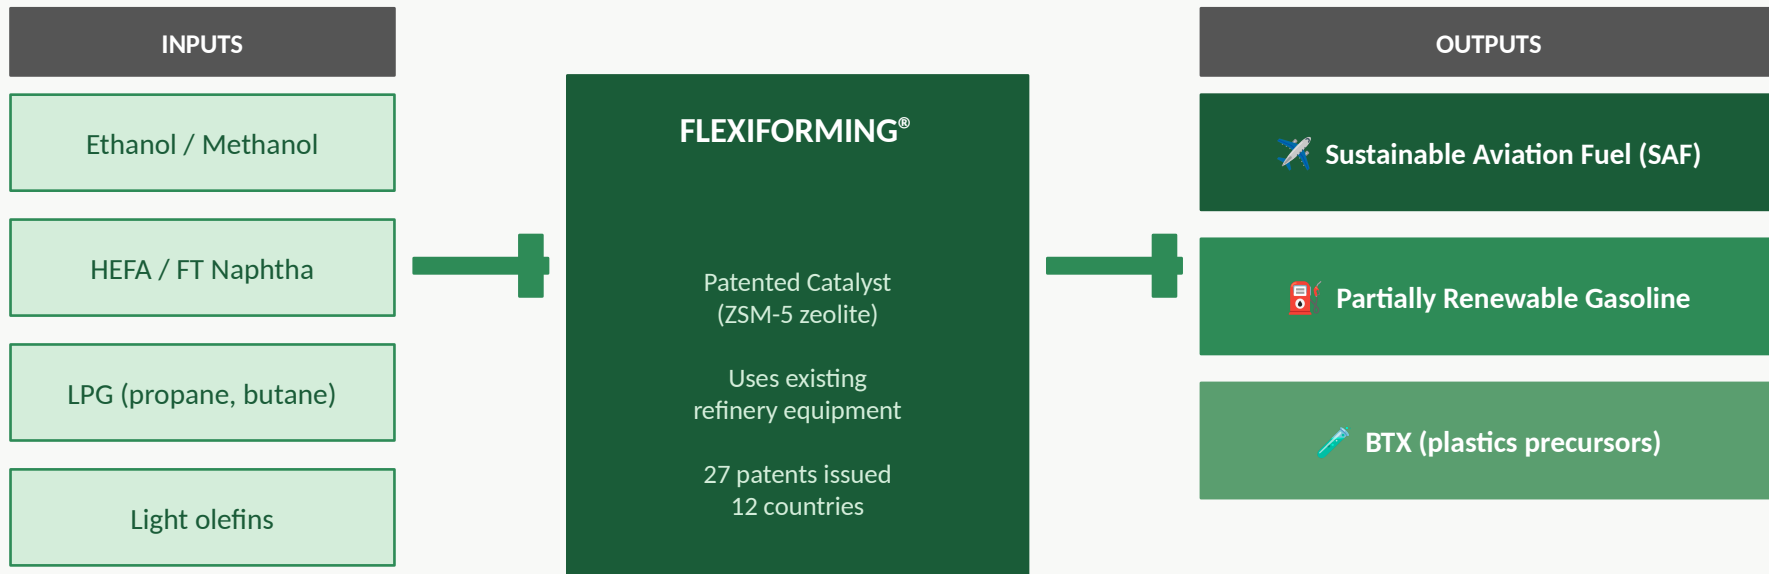

\$45B+ in signed offtake agreements

\$50B

technology licensing market
opportunity by 2050

UFT target: \$14B by 2050

Flexiforming® — One Technology, Many Pathways

Key advantage: Retrofits into EXISTING refinery equipment — no billion-dollar greenfield build needed. Payback in 6-24 months.

Proof it works — customers paying, plants launching

US WEST COAST — FID reached Feb 2026

Two plants: 200 bpd + 3,000 bpd
Product: Semi-renewable gasoline → SAF
Payback: 6 months | **Client-funded**

SOUTH ASIA — Launch 2026

Plant: 21,000 tpa (500 bpd)
Product: Semi-renewable gasoline → SAF
Payback: 2 years | **Client-funded**

One technology, three recurring revenue streams

1

Technology Licensing

Upfront + ongoing fees
(like enterprise software)

95% gross margin

2

Proprietary Catalyst

Recurring replacement
for ~50 years per plant

25–45% gross margin

3

Engineering Services

Upfront project
delivery fees

90% gross margin

Blended all-in EBITDA margin >50%

UFT Revenue Potential

Today

In progress

2030

\$250M

2050

\$14B

Founding team — 12 years working together

AB

Alexei Beltyukov

CEO

- Founder with 3 profitable exits
- One 30× return in energy/chemicals
- Prior companies: McKinsey, AkzoNobel

DP

Denis Pchelintsev

VP Engineering

- 35 patents in fuel chemistry
- Led previous engineering center
- Deep catalysis expertise

SPS

Stephen P. Sims

VP Business Development

- >30 years at major oil refineries
- Was Technical Manager & tech license buyer
- Sold 2 technology licensing businesses

THE ASK

Raising \$7–10M Series A

We do not plan to raise beyond Series A.

KEY USES OF FUNDS

\$4M Operating costs until profitability

\$2M Pilot / demo facility

\$1M ASTM SAF qualification

up to \$3M Reserve

Ready for Takeoff

Technology Ready

Patented, tested across 50+ feedstocks. First commercial plant FID reached.

Customers Paying

2 client-funded plants launching in 2026. \$230M revenue pipeline.

Massive Market

\$50B licensing opportunity. SAF demand exceeds supply by 100x.
